RAW MATERIALS

COULEURS DE PLANTES

couleurs-de-plantes.com | Stand N9

From Plant to Colour... Couleurs de Plantes® offers a wide range of natural colors from plants grown by our farming partners, mainly in France but also in tropical countries. The company develops and produces the extracts in France using environmentally friendly processes. The coloring extracts comply with natural and ecological cosmetic standards: ECOCERT®, COSMOS®, Standard NF ISO 16128. The products are in the form of soluble or insoluble powders, for Hair Dyeing, Care & Hygiene, Make-up.

ID BIO / NOVACAP

idbio.eu | Stand F15

ID bio, your manufacturer of botanical ingredients - Specialized in BOTANICAL EXTRACTS (Especially designed and created from a large selection of vegetable raw materials), TITRATED EXTRACTS (Extracts mastered with the characterization/assay of active molecules) and ACTIVE INGREDIENTS (Active ingredients highly reproducible from batch to batch, developed with well-mastered biotechnological processes).

PERLES DE GASCOGNE

perles-gascogne.com | Stand M12

Rare oils production - Perles de Gascogne is specialized in the production and distribution of cold pressed virgin oils. Our original approach is to produce or distribute oils from an integrated and fully controlled supply chain. Most of our oils are manufactured with our new production tool set up at the beginning of 2018. Our challenge is to make our rare and premium virgin oils and exfoliating powders essential to natural and organic cosmetics as ingredients.

PHENOBIO

phenobio.fr | Stand M6

A new patented natural active will be launched during the Cosmetic 360 exhibition in Paris. NUCIFERINE® is an anti-aging agent which stimulates key markers of detoxification and DNA repair cell system. Obtained by subcritical water extraction of Coconut shell, it is highly concentrated in piceatannol, a polyphenol of the stilbenes family. NUCIFERINE® is China compliant and contains no preservatives.

POLYMEREXPERT

polymerexpert.com | Stand N13

Fatty phase gelling polymers - After the successful launch of the oil thickening agent **EstoGel M®** with its exceptional properties, PolymerExpert continues its momentum offering ready-to-use raw materials **EMC30** and **EMI30**. Their main advantage is their simple solubilisation method in oily phase. These products allow gels with an equal quality as gel with **EstoGel M®** and can easily be implemented at 80°C.

UGIEL

ugiel.fr | Zone Startups

Precious colors makers - Using the experience of several years of research and development, UGIEL takes advantage of the outstanding properties of gold to give their pigments a wide range of colourful appearances and functionalities. Totally inorganic and with water being the only solvent, these pigments will find applications on various fields of the cosmetic industry showing that gold could be more precious than it looks like...

TESTING & ANALYSIS

BIOALTERNATIVES

bioalternatives.com | Stand N11

In vitro testing services - Since 1996, the Contract Research Organization (CRO) Bioalternatives has been committed to developing effective alternative methods to animal experimentations for the cosmetic industry. The company offers a full range of solutions for preclinical research or for the evaluation of cosmetic active ingredients and formulations (screening, efficacy assays, mechanism of action studies and proof-of-concept, benchmarking, etc).

CEREVAA

cerevaa.com | Stand M8

Nuclear Magnetic Resonance serving the Cosmetics Industry - Research center under contract, Cerevaa develops, via NMR technologies, innovative methods to answer questions raised by cosmetic companies such as: measuring the hydration capacity of an active ingredient, a skin or a hair / predicting the stability of formulas / monitoring the stability of active compound, excipient, preservative / searching for the origin of a defect...

COSDERMA

cosderma.com | Stand M4

In vivo biomedical researches on healthy subjects to evaluate the Tolerance and Efficacy of cosmetic products, cosmeto-textiles, food supplements, dermo-cosmetic products or medical devices. The impacted implantation of our Laboratories, in France (Bordeaux) and China (Wuhan) permits us to supply you with a panel of a thousand Caucasian and Asian subjects in order to assess your cosmetic products.

FLUOFARMA

fluofarma.com | Stand M14

Fluofarma is a **contract research organization (CRO)** with over 10 years of experience in cell-based assay development. Fluofarma's primary cell-based assays, together with skin biomarker staining and analysis, assess the efficacy of cosmetic's ingredient to support claims of cosmetic products. Fluofarma provides tailored made assays to its clients, using different types of primary skin cells or reconstituted human skin. Our different platforms provide a combination of readouts for fast and reproducible data.

IDEA TESTS

groupeideatests.com | Stand N15

The Cosmetic Test Company : Safety, Efficacy, Advice - Specialized in efficacy evaluation (in vivo and in vitro), tolerance and toxicology of finished products and ingredients for the cosmetic industry, Idea Tests activities are organized into five categories: clinical testing, in vitro testing, microbiology, suncare testing, regulatory advice and expertise. Today, the group is made up of one hundred employees, spread across 5 locations in Europe. It has completed more than 20,000 tests for both global brand leaders of the cosmetic industry and smaller brands.

IMASENS

imasens.fr | Stand N7

12 years of experience in marketing and sensory surveys to the perfume-cosmetic area

IMASENS, a marketing and sensory research company created in 2006, supports companies from the earliest stage of the product's innovation and development until the launch stage. IMASENS works in collaboration with more than 400 clients in France and abroad and carries out more than 900 consumer studies every year, almost a third of them are cosmetic's product tests.

KAMAX INNOVATIVE SYSTEM

kamax-innovative.com | Stand N1

K-probe, the solution that studies the skin by images - Young innovative company, Kamax has developed an optical characterization method to observe any type of fiber, that makes it possible to quantify biological modifications by images. The K-probe is the first polarimetric scanner of histological slides. The resulting contrasts allow a more precise, complete and faster analysis of samples with a resolution less than a micrometer or 1000 times smaller than a millimeter. The characterization of dermal collagen fibers is one of the major applications for Kamax.

UT2A

ut2a.fr | Zone Startups

Technical center in analytical chemistry: from the service to the custom analysis - Leading laboratory in trace elements, nanoparticles and organic volatile compound analysis. In cosmetics, UT2A has developed analytical methods for the determination of titanium dioxide and other types of nanoparticles containing gold, zinc, silver... and can help you to determine size, size distribution, aggregation/agglomeration level and stability.

OEM, ODM & CMO

ART&COS

artcos-laboratoire.fr | Stand M12

From idea to exceptional product... Cosmetic laboratory of R&D and of subcontracting, Art&Cos answers to promoters' project by accompanying them in the creation of innovative concept, formulation, regulatory requirements, production and packaging of cosmetic products. Respect of the environment, guarantee of an excellent quality and an impeccable technical knowledge, creativity, constant innovation and respect of organic standards (Ecocert/ Cosmos certification) are essential to us.

POIETIS

poietis.com | Stand M10

Bioprinted Tissue Models - Poietis develops physiological models for actives cosmetic evaluation and preclinical research laboratories in order to propose predictive models reproducing human physiology. A unique and patented 3D laser-assisted bioprinting technology allows the precise 3D reconstruction of organized tissue by successive layer deposit with many advantages over other bioprinting technologies and conventional cell culture: resolution, viability and precision. Poieskin® is the first full skin tissue model.

RIVADIS

abo-rivadis.fr | Stand N2

LABORATOIRE RIVADIS

Manufacturer of care, hygiene and cosmetic products - Laboratoire Rivadis is well trusted by leading French cosmetic brands to manufacture their products. Our assets: a real reactivity, ready to develop a suitable offer 'Made in France', from the formulation up to manufacturing and including a full regulatory follow up.

SKINLYS / SOLLICE BIOTECH

skinlys.com | Stand N7

Skinlys offers high-tech manufacturing facilities that are GMP ISO 22716 certified. We create added value for our customers by continuously reinvesting in our R&D laboratories and production facilities. Our expert teams create, develop and produce bulk as well as finished products and provide full-service as well as contract manufacturing solutions. From the mere idea of a beauty product to its actual delivery, we're here to help.
