RAW MATERIALS

PERLES DE GASCOGNE

perles-gascogne.com | Stand P14

PERLES DE GASCOGNE: «unique and premium» raw materials for a natural cosmetics. Our original approach is to produce oils from an integrated and fully controlled supply chain. Most of our oils are manufactured with our new "ECO-RESPONSIBLE" production tool set up at the beginning of 2018. Our challenge is to make our unique and premium virgin oils and exfoliating powders essential to natural and organic cosmetics as ingredients.

POLYMEREXPERT

polymerexpert.com | Stand N5

POLYMEREXPERT presents a new oil gelling agent: emc30. EMC30 is a ready to use oil gelling agent, combining efficacy and naturality in one ingredient. The main advantage of EMC30 is its simple solubilisation method at 80°C in oily phase. This natural origin gelling agent, more than 97% biosourced brings transparency, suspensivity, viscosity, perfect stability and thixotropy to anhydrous gels with a soft and pleasant after feel.

TESTING & ANALYSIS

ADNid / QUALTECH GROUPE adnid.fr/qualtech-groupe.com | Stand P4

ADNid is a Contract Research Organization approved for the Frances tax credit for research and development. Our laboratory is certified ISO 17025. **ADNid/QUALTECH Group** in partnership with ATOXIGEN offer an innovative genomic quantitative method to analyze products effects on the cutaneous microbiome, this fundamental skin bodyguardis. This partnership offers a unique window combining in vivo/in vitro solution and molecular assay for cosmetic substantiation of finished cosmetic products and raw materials.

ATOXIGEN

atoxigen.com | Stand P4

ATOXIGEN offers customized assays based on the latest innovations in cell biology and genomics using in vitro 3D skin model (reconstructed epidermis and explants): In vitro/In vivo testing, Skin Microbiome, Molecular analysis (ADNid – QUALTECH) | Anti-pollution Assays | Skin barrier studies | Endocrine disruptors /In vitro micronucleus Assays | Photo aging effects

BIO-HC

bio-hc.fr | Stand P12

BIO-HC will present its new project: the development of an alternative tool for the evaluation of skin sensitization. This model, RHETCOAT, is based on the use of the validated reconstructed human epidermis (RHE) model cocultured with THP1 cells (antigen-presenting cells). It is used to address Key Events in skin sensitization process: keratinocytes activation (KE1) and dendritic cells activation-maturation (KE2).

BIOALTERNATIVES

bioalternatives.com | Stand P8

In the era of artificial intelligence, the use of digital data has become an essential analysis tool in the field of biology. This is why **BIOALTERNATIVES** is now enriching its expertise with in silico virtual screening and phytochemical profiling in order to predict ingredients' biological activity. This technology is offered prior to the in vitro and ex vivo assays historically provided by the company for cosmetic claim substantiation.

CEREVAA

cerevaa.com | Stand P10

In a constant innovation approach, **CEREVAA** present at Cosmetic 360 2019 methods developed by low-field NMR to characterize hydration of reconstituted skins (manually or 3D bioprinting), skin explants or stratum corneum (with absence or presence of active ingredients).

COSDERMA

cosderma.com | Stand P6

COSDERMA performs in vivo biomedical researches on healthy subjects to evaluate the Tolerance and Efficacy of cosmetic products, cosmeo-textiles, food supplements, dermo-cosmetic products or medical devices. Our expertise in efficacy and our unique level of equipment are recognized by the industry and are allowing us to offer you innovating protocols adapted to your claims.

EMULSEO

emulseo.com | ZONE START-UP

EMULSEO develops and sells surfactant formulations for the biotechnological applications of droplet based microfluidics such as PCR, screening, single cell analysis, diagnostics...

FluoSurf is a fluorinated surfactant biocompatible, stable, reproducible from batch to batch, leak-proof and with a high purity (more than 99%).

FLUOFARMA

fluofarma.com | Stand N11

FLUOFARMA is a contract research organization (CRO) with more than 10 years of experience in cell-based assay development. Fluofarma's primary cell-based assays, together with skin biomarker staining and analysis, assess the efficacy of cosmetic's ingredient to support claims of cosmetic products. Our multi-technology platform is dedicated to cell-based systems, using automated, multiplexed and miniaturized technologies.

IDEA TESTS

groupeideatests.com | Stand N15

Since 1999, the **IDEA TESTS Group** has specialized in efficacy evaluation (in vivo and in vitro), tolerance and toxicology of finished products and ingredients for the cosmetic industry. IDEA TESTS Group activities are organized into five categories: clinical testing, in vitro testing, microbiology, suncare testing and regulatory advice. IDEA TESTS Group will present its new test protocols for anti-pollution claims.

IMASENS

imasens.fr | Stand N9

IMASENS developed new approaches allowing to combine explicit and implicit measures of satisfaction and emotions. These new tools enable to explore unconscious emotions level and also to relate the sensory features with the emotions generated by the product. Imasens, a marketing and sensory research institute created in 2006, carries out more than 900 consumers studies every year, almost a third of them are tests for cosmetic product.

INSILIBIO

insilibio.com | ZONE START-UP

INSILIBIO is a revolutionary contract research organisation. We use innovating solutions to test molecules through original bioinformatic methods. Our proposed methods are fully ethical, fast, reliable and cost-effective. Our digital solutions either reduce risk and optimise the effectiveness of R&D programs. We are, in this way, pioneers in our molecular modelling sector.

KAMAX INNOVATIVE SYSTEM

kamax-innovative.com | Stand N13

The K-PROBE, the first polarimetric scanner of histological slides, is an innovative imaging platform. The resulting contrasts allow a more precise, complete and faster analysis of samples with a resolution less than a micrometer or 1000 times smaller than a millimeter. The characterization of dermal collagen fibers is one of the major applications for **KAMAX**.

OEM, ODM & CMO

ART&COS

artcos-laboratoire.fr | **Stand P14**

ART&COS is an eco laboratory of Research Development for cosmetic innovations. Art&Cos laboratory guides all project promoters by bringing its skills to pioneers at each development stage from idea conception to final delivery of cosmetic products, through formulation regulatory framework packaging design, production and packaging.

PACKAGING

LYS PACKAGING

veganbottle.com | **Stand N7**

From plant and compostable, a 50 ml cosmetic jar joins the bottles range of VEGANBOTTLE: the innovative packaging alternative of **LYSPACKAGING**, providing solution to reduce the worldwide plastic pollution. VEGANBOTTLE offers coherence between content and container for the brands committed to create a new eco-friendly packaging for the future.

Cosmetic in Nouvelle-Aquitaine, a comprehensive value chain from local resources to end-product

In Nouvelle-Aquitaine, the Cosmetic Valley competitiveness cluster's regional office works in close partnership with ADI N-A, the regional development and innovation agency. Together, they promote Nouvelle-Aquitaine companies and research laboratories, through:

- Individual product / process innovation actions
- Grouped assistance for business events
- Organizing and promoting the sector
- Supporting new businesses to set up and develop in the region
- Promoting know-how in perfumery and cosmetics
